NeuraTrace

Advanced Network Security Analysis Tool

Project: Network Security & Analysis Platform

Presented by: Adesh Yadav

Reg. No. : 12217654

Motivation

Network security professionals face critical challenges that slow down threat detection and response. NeuraTrace addresses these pain points head-on.

Tool Fragmentation

Security teams juggle multiple disparate tools, leading to workflow inefficiency and gaps in visibility

Complexity Barrier

Traditional CLI-based tools require extensive training and create operational bottlenecks

Data Without Context

Raw network data floods in without actionable intelligence or risk prioritization

Manual Workflows

Security audits remain time-intensive with repetitive manual tasks slowing critical analysis

Comprehensive Feature Set

Core Capabilities

Port & Service Discovery

Automated scanning detects open ports and identifies running services with version fingerprinting

Real-Time Packet Capture

Live traffic monitoring with intelligent protocol filtering and deep packet inspection

Automated Security Analysis

AI-powered vulnerability assessment with risk scoring and remediation recommendations

Interactive Dashboard

Modern web interface visualizes network topology, traffic patterns, and security findings

Flexible Reporting

Export comprehensive findings in multiple formats for compliance and stakeholder communication

Technology Stack

NeuraTrace leverages modern, battle-tested technologies to deliver enterprise-grade security analysis with exceptional performance and reliability.

Python Core

Python 3.8+ foundation with Scapy for packet manipulation, PyShark for protocol analysis, and Psutil for system monitoring

Streamlit Frontend

Rapid development framework delivering responsive, interactive web interfaces with minimal complexity

Plotly & Pandas

Advanced visualization engine paired with powerful data analysis capabilities for actionable insights

Google Gemini AI

Integrated AI intelligence for automated threat detection, pattern recognition, and security recommendations

Future Roadmap

NeuraTrace is evolving into a comprehensive security operations platform with advanced automation and collaboration features.

1

AI-Driven Threat Intelligence

Machine learning models for anomaly detection, automated incident response, and predictive threat analysis

2

Compliance Automation

One-click compliance reporting for NIST, ISO 27001, and PCI DSS with automated evidence collection

3

Cloud-Native Architecture

Distributed scanning capabilities, remote agent deployment, and real-time team collaboration features

4

Plugin Ecosystem

Open API and community-driven extensions for custom integrations and specialized security workflows

Thank You

NeuraTrace represents the future of accessible, intelligent network security analysis—unifying fragmented tools into a streamlined platform that empowers security teams to work faster and smarter.
